

# PredictCrypto

## PredictCrypto

This package is not ready yet and is here so I can use it for my own development

PredictCrypto is a website on which I offer free programming tutorials using cryptocurrency data that is never outdated by more than 1 hour: <https://www.predictcrypto.com/tutorials>

### Installation

```
library(devtools)
install_github("ries9112/PredictCrypto")
```

### Usage

Create a new dataset with cryptocurrency data

```
crypto_data <- get_crypto_data()
```

Calculate the % change over a certain number of hours

```
crypto_data <- calculate_perc_change(crypto_data, 24, 'hours')
```

### Examples

Calculate the % change over a 7 day period

```
crypto_data <- calculate_perc_change(crypto_data, 7, 'days')
```

### To-do

- Setup CI to refresh data `crypto_data` that comes with the package hourly
- Document functions
- Calculate target % change using BTC
- Create variable names based on hours chosen for % change calculation using tidyeval
- Create data by exchange made available through package
- Create plotting functions
